B Deck

BUILDING END-USE

Warehousing

Alro Steel in Niles, Michigan, expanded its 127,000 sf facility by adding over 97,000 sf of extra warehouse and storage space. The left end wall of the existing building attaches to the right end wall of the addition.

This three-building expansion utilizes gable symmetrical, asymmetrical, and single slope framing systems. Four 15-ton overhead cranes, steel racking systems, and vertical lift doors assist with Alro Steel's distribution of metals, plastics, and industrial supplies. Door framed openings are 16' tall with 4' below grade for the loading dock and drive-through areas.
